

LIBERATOR®

TACTICAL LIGHT

THE ADVANTAGES

The Liberator Tactical Light is an LED light like no other flashlight ever made – it removes the limitations of your traditional, tube-shaped flashlights and gives you full use of your hands, allowing you to perform tasks like two-handed shooting, K-9 handling, reloading, clearing weapon malfunctions and much more.

ADVANTAGE #1: HANDS-ENABLING.

Your hands are meant for doing your job – not for holding your flashlight. Only Liberator gives you full use of your hands for activities like climbing, handling equipment and more- activities you simply can't perform with a traditional flashlight tying up your hand and getting in your way.

ADVANTAGE #2: HANDS-FREE.

If you need to go completely hands-free, Liberator gives you that option. Its 90-degree design allows you to direct light where you need it, whether mounted to your belt, tucked in a pocket, or attached to your shirt via our MOLLE-compatible Retention Clip.

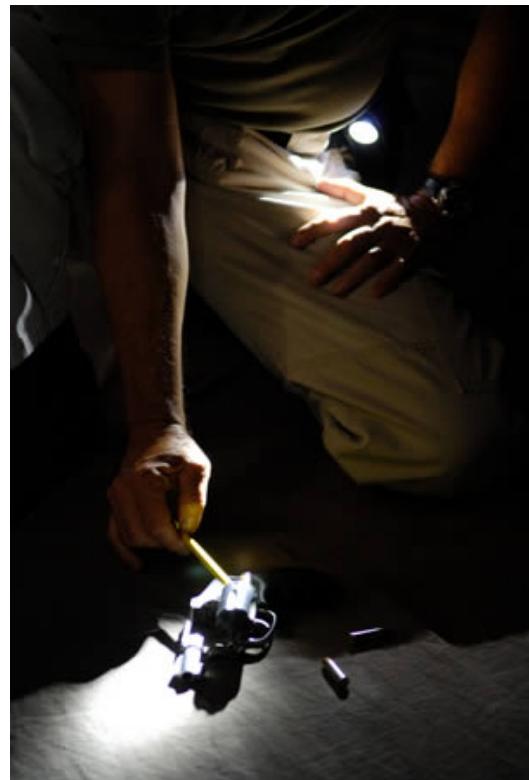

The 90-degree design of Liberator means it's always pointed in a useful direction, even when it's holstered.

Holster your tube-shaped flashlight, and it automatically points in one of three, completely useless directions: into the bottom of the holster, to the ground, or into your armpit.

Liberator work for you, whether "tactically" staged on your hand or "practically" stowed elsewhere.

The 90-degree angle head allows the light to be oriented "forward" into your area of concern when worn on your hand, clipped to your gear, in your pocket, on your belt or stowed in their holsters. It's active, dynamic and READY at all times.

"Staged," not stowed;
"Active," not passive.

**ADVANTAGE #3:
TWO-HAND PISTOL GRIPS.**

You shoot two-handed in the daylight – why not shoot two-handed in the dark? Liberator eliminates the clumsy flashlight shooting techniques that reduce your accuracy, control and confidence.

**ADVANTAGE #4:
NO MORE TRIPS TO THE
DENTIST.**

How many times have held your flashlight in your armpit, between your legs or in your mouth? (Or worse, one after the other?) Liberator is always staged for ready on your hand, so you never have to stick your flashlight where you don't want it to get the light you need.

**ADVANTAGE #5:
HOLD YOUR WEAPON ANY
WAY YOU WANT.**

Because Liberator is infinitely adjustable, you can position your hands wherever you feel most comfortable. With Liberator, you don't have to compromise the positioning of your hands to get the light you need.

**ADVANTAGE #6:
FAST WEAPON TRANSITIONS.**

Because Liberator is adjustable specifically to the size, shape and position of your hand, you're able to switch between handguns, long guns and other tools instantaneously, and without the need for costly weapon-mounted lights.

**ADVANTAGE #7:
QUICKER MAGAZINE
CHANGES & MALFUNCTION
CLEARING**

With Liberator, you can quickly change a magazine or clear a chamber instantly – without wasting precious time stowing your light.

ADVANTAGE #8: HANDLING CANINES.

There's a reason the US Border Patrol outfits all its K-9 Officers with Liberator Tactical Lights: Liberator is the perfect lighting solution for K-9 Officers - it allows you to handle your lead and light with the same hand, leaving your other hand free.

ADVANTAGE #9: CONTROL TACTICS & CUFFING.

When you need to put hands on a subject or handcuff, Liberator allows you to do so without dropping or stowing your light. You're able to react more quickly and easily, and focus on controlling the situation, instead of your light controlling your actions.

ADVANTAGE #10: RIDE EASY.

Whether on a bicycle, horseback or an ATV, Liberator makes it easy to use your light and ride at the same time, with no worries about dropping your light.

**ADVANTAGE #11:
SAFE-SEARCH.™**

Weapon-mounted lights turn your firearm into a "loaded flashlight" – you have to point your weapon to use your light. But the First-Light Safe-Search™ method allows you to keep your muzzle disciplined and pointed in a safe direction, without sacrificing the use of your light.

Light forward, muzzle down - until you need it.
Handgun or long gun.

**ADVANTAGE #12:
THE OPTIONS YOU NEED.**

Whether you need a disorienting strobe, a red filter, a MOLLE-compatible Retention Clip or our NEW hands-illuminating Task Light, there's a Liberator model that's perfect for your needs.

FEATURES & CONTROLS

CONTROL PANELS

At First-Light USA, we believe that your light should do exactly what you want, exactly when you want it to. Unlike other multi-function flashlights, which require dials and buttons placed in inconvenient places like tailcaps, our controls are designed to be operated with the simple click of your finger or thumb. Our controls are intuitive, easy to learn and even easier to operate, allowing you to focus on the task at hand, always.

LIBERATOR®

1. BRIGHTNESS CONTROL

Cycles between three levels of brightness. Also switches Task Light on and off when main LED is off (STT models only).

2. CONSTANT-ON CONTROL

The "on/off" switch for continuous light in Constant-On mode.

3. SPLIT-SWITCH CONTROL (GP, ST and STT models)

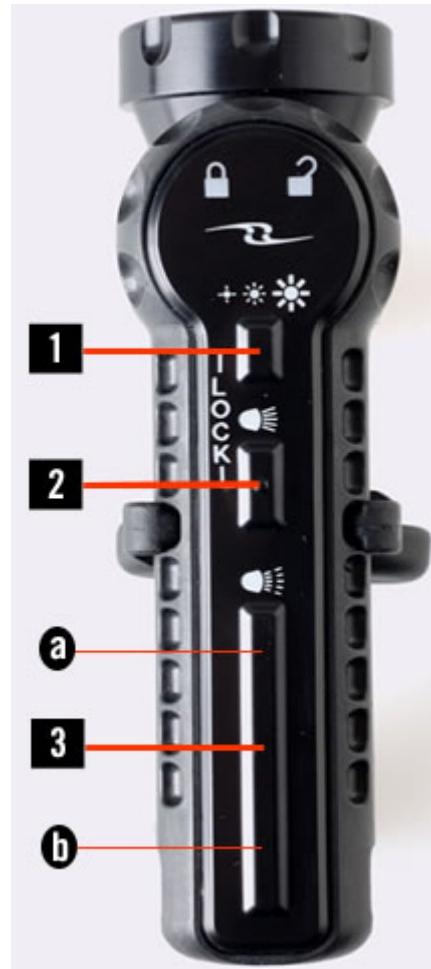

For added functionality on select models, the Split-Switch is divided into two segments:

a. Controls Strobe functions on ST and STT models; controls instant Low function on GP model.

b. Momentary function provides instant light when not in Constant-On Mode; also allows instant transition to full intensity from any brightness level.

3. MOMENTARY CONTROL (LP model)

Provides instant light when not in Constant-On Mode; also allows instant transition to full intensity from any brightness level.

AVAILABLE MODELS

LIBERATOR GP

Mil-Spec version. Made in the USA and designed to withstand the rigors of the US military.

- 120 Lumen Output LED
- Momentary and Constant-on with 3 Brightness Levels
- Natural Type III Hard Anodized Finish
- Includes MOLLE-Ready Clip, Red Flip-Up Filter, Batteries and User Manual
